UDYAMI SETU

Proposed Solution — one guided, time-bound journey that replaces dozens of scattered licence processes.

What it is

- A single web portal that replaces dozens of scattered licence processes with **one guided, time-bound journey**.

How it works

- **Know-Your-Approval**: answer a few questions and instantly get the exact licences / NOCs needed — each tagged **self-certify or inspection**, with the reason and legal deadline.
- **One-click filing**: self-certifiable approvals auto-approve at once; the rest route to the right departments with **live SLA timers**.
- Coordinated inspection bundles many site visits into one; live dashboards for the applicant, officer and state.

Innovation & uniqueness

- **Rules-as-data engine** — regulations stored as editable data, not code; add a licence or a state by adding a row. **Deterministic and auditable** — no AI guessing the law.
- **Deemed approval + enforceable SLAs** (like Telangana TS-iPASS): miss the deadline and it is auto-approved — government delay can no longer block the entrepreneur.
- **Answer-once onboarding** ends repeated form-filling across departments.

Answer once, reuse everywhere

Deemed approval kills delay

Rules-as-data, fully auditable

TECHNICAL APPROACH

Technology stack

- **Frontend:** Next.js 14 (React + TypeScript), Tailwind CSS.
- **Backend:** Next.js server actions — API + logic in one codebase.
- **Data & Auth:** Supabase (PostgreSQL + Row-Level Security).
- **Engine:** deterministic rules-as-data checklist (pure TypeScript). Analytics: Recharts · Hosting: Vercel.

Platform & governance

- **Role-based access** — Applicant · Officer · Nodal.
- **Full audit log** — every action time-stamped.
- **Risk-based scrutiny** — CPCB Red / Orange / Green / White categories.
- **Deterministic engine** — same inputs, same result; no black-box AI.

The applicant's journey — one guided, time-bound flow

*Self-certifiable approvals clear instantly. If a department misses its statutory SLA, the licence is **auto-approved (deemed approval)** — so government delay can't stall the entrepreneur.*

FEASIBILITY AND VIABILITY

Feasibility

- **Technical** — proven low-cost managed stack (Next.js + Supabase + Vercel); quick to build and scale; free tiers cover a pilot.
- **Operational** — a working prototype already runs end-to-end across applicant, officer and nodal roles with seeded demo data.
- **Economic** — rules-as-data means onboarding a new department or state is configuration, not re-coding.

Challenges → Solutions

Legal accuracy

Rules curated with domain / legal experts; a versioned audit trail keeps every change traceable.

Data silos

Integrate with NSWs, DigiLocker and e-Sign so documents flow between departments.

Officer adoption

A deliberately simple officer console; phased department-by-department rollout.

Accountability & delay

Deemed approval creates accountability without extra work for staff.

IMPACT AND BENEFITS

Impact on the target audience

- **Entrepreneurs / MSMEs** — know exactly what's needed; approvals in days, not months; no repeated paperwork or middlemen.
- **Government & officers** — cleaner risk-prioritised queues, less back-and-forth, a real-time view of where things are stuck.

Benefits

- **Economic** — faster time-to-operations → quicker investment, jobs and a better ease-of-doing-business ranking.
- **Social** — transparency and accountability; less discretion and corruption; equal access for small & rural entrepreneurs.
- **Environmental** — risk-based scrutiny targets inspections where pollution risk is real.
- **Governance** — delay analytics drive data-informed policy; deemed approval enforces citizen-charter timelines.
